

IS THE HEALTH OF YOUR TENANTS BEING PUT AT RISK?

**DOES YOUR HOUSING STOCK DEMONSTRATE SIGNS OF ANY OF THE FOLLOWING?**

- Cold patches on internal walls
- A build up of condensation and mould on internal walls
- Decorative surfaces becoming stained with paint flaking off
- The property may smell of damp

## **THIS COULD BE CAUSED BY WRONGLY INSTALLED OR FAILED CAVITY WALL INSULATION**

### **MATERIALS THAT CAN BE EXTRACTED:**

The majority of failed or wrongly installed cavity wall insulation can be extracted.

### **RESOLUTION**

The effects of wrongly installed and failed insulation are almost immediately resolved once the cavity wall insulation is removed and the property is cleaned and aired.

### **INSULATION EFFECTIVENESS**

Did you know that if insulation becomes damp by even a small percentage it may cost your tenants more to heat their house than a property with no cavity wall insulation.

## **GRANT FUNDING**

Where suitable, grant funding may be available for re-blowing cavity wall insulation. The amount of grant and the cost of the works will vary depending on eligibility and on how much CO2 is saved by installing the measure.

### **THE CAVITY WALL EXTRACTION PROCESS:**

- Fully risk assessed prior to installation
- A complete technical survey is carried out by our experienced surveyors
- All works are carried out by our Oscar approved cavity wall extractors
- All works are non-disruptive to neighbouring properties insulation

**Contact one of the team for a no obligation sample survey on your stock to see if your properties are at risk**
